

**FUTURE  
VILLAGE**

**NATURE BASED PLACEMAKING**

## Imagine what could be

Good public design goes beyond aesthetics and considers how spaces and objects function and feel for the people who use them. It's about creating environments and solutions that enhance the well-being of individuals and communities.

Our design and placemaking team works with architects, town planners and engineers. We specialise in the translation of placemaking data into the design and build of a shared space. This can be for permanent, long term temporary, or short term fast activations.

We follow a simple methodology;

- Understand the vision. Why are we doing this and what is the emotive response that is desired.
- Develop the strategy and design to bring the vision to life.
- Project manage and execute the design requirements.

We provide design information in various formats from sketches and annotations, 3D renders, fly throughs to scaled plan drawings. Sunlight modelling for plant selection.

In essence, good design is a multi-faceted process that involves creativity, empathy, collaboration, and a deep understanding of the users and their needs. It has the power to shape our environment and contribute significantly to the well-being and happiness of individuals and communities.

FUTURE VILLAGE INTERACTION WITH THE PLACEMAKING LIFECYCLE

## Paint the town green

People want to surround themselves with nature. The desire to feel calm and peaceful, to escape the stresses of everyday life, to connect with the natural world and its beauty, and to improve their mental and physical health. We strive to create these environments.

We offer innovative and sustainable solutions for delivering free-standing green infrastructure to areas where access to green space is limited.

All our green infrastructure have a built in wicking system that supplies water to the plants, when they need it, from the internal water reservoir. This greatly improves plant health and reduces maintenance.

WICKING HANGING BASKETS - PARRAMATTA

POWDER COATED WICKING TREE BOX - NEWCASTLE

WICKING STREET AND TREE STAINLESS COMMERCIAL PLANTERS - BONDI JUNCTION

## Cool it

This area is too hot. However everywhere is paved, services are running underground and excavation is going to be expensive. What are the alternative?

Free standing shade and cooling structures are an ideal way to bring down the heat. We have a variety of options from the futuristic urban canopees, our solar powered green misting tower through to practical shading using a variety of elements and differing designs.

## Reclaim the street

There is a global move to reclaim the streets from vehicles back to pedestrians. A common solution is the conversion of car spaces to public spaces by converting these to outdoor dining, public gathering, relaxation and green zones. These areas are commonly referred to as parklets.

We have a range of transportable and modular products that are designed for road and cafe parklets. All engineered for heavy wear and tear, low maintenance, stormwater flow and pedestrian safety.

MODULAR PAVILLION PARKLET - SUTHERLAND

TRANSPORTABLE PERGOLA PARKLET - LIVERPOOL

MODULAR PARKLET - WATSONS BAY

## Float around

Can you transform unused, unattractive hard space into a beautiful and inviting green oasis? You bet you can.

With wicking beds, single point water refill, topography, these floating gardens can transform any surface.

Floating gardens help to mitigate the urban heat island effect by absorbing heat and releasing oxygen. They also help reduce stormwater runoff, improve air quality, and provide habitat for birds and insects.

Floating gardens bring people together, fostering a sense of community and providing opportunities for social interaction and recreation.

FLOATING GARDEN - PARRAMATTA

FLOATING GARDEN - WOLLONGONG

## Chill out

In all towns and cities there are areas of poor public design. These areas may be lacking in greenery, be stressed due to urban heat island effect, lack public seating or have no components to attract the local community to dwell, shop local, exercise or just appreciate the outdoors.

Custom made, free standing and very versatile in the way they can be used we provide a great solution to open areas where there are greyscape areas with little or no greening.

Our free standing modular systems require no excavation or surface preparation and can be configured into so many options.

STAGE AND LANE REDESIGN - GUILDFORD

FLOATING LAWN - MILDURA

URBAN PARKLET - CANBERRA

## Time for a chat?

Give any of us a call or drop us an email as we'd love to see if we can help you re-imagine a place.
